#### Empathy Map Canvas:

An **Empathy Map** helps our team understand the **needs, thoughts, feelings, and behaviors** of the users of the **House Rent** platform. It enables us to view the rental process from the perspective of **tenants and landlords**, allowing us to identify their challenges and expectations.

By understanding what users **say, think, do, and feel**, we can design a **secure, user-friendly, and efficient house rental system** that simplifies **property searching, property listing, booking management, and communication**. The empathy map helps ensure that the developed solution addresses **real user problems**, improves the **overall user experience**, and builds **trust and satisfaction** among all users.

The **Empathy Map Canvas** serves as a foundation for developing features that meet **customer needs**, reduce **rental difficulties**, and create a **reliable digital house rental platform**.
