

Project Design Phase
Solution Architecture

Date	30 June 2026
Team ID	
Project Name	House Rent
Maximum Marks	4 Marks

Solution Architecture:

The House Rent solution architecture provides a scalable and secure web-based platform that connects tenants, landlords, and administrators through a centralized property rental system. The architecture follows a three-tier architecture consisting of the Presentation Layer, Application Layer, and Database Layer. The main objectives of the architecture are

- Provide a secure property rental platform.
- Enable role-based access for Tenants, Landlords, and Administrators.
- Manage authentication and authorization using JWT.
- Store property, booking, review, and user information securely in MongoDB.
- Provide RESTful APIs for seamless communication between the frontend and backend.
- Support scalable deployment and future enhancements
