Project Name	House Rent
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The **House Rent** project focuses on identifying the **real challenges faced by tenants and landlords** during the house rental process and providing a **practical digital solution** to overcome them. The proposed system enables users to **search verified rental properties, list properties online, schedule property visits, manage bookings, and communicate efficiently** through a single platform.

By understanding the **needs, behaviors, and expectations** of customers, the project delivers a solution that **reduces manual effort, improves transparency, and simplifies the rental process**. It helps both tenants and landlords complete rental activities more quickly, securely, and conveniently.

Purpose

- **Solve** the challenges faced by tenants and landlords through a **secure and user-friendly house rental platform**.
- **Simplify** property searching, property listing, booking management, and communication using a **single digital solution**.
- **Improve** user experience by providing **verified property information, easy navigation, and role-based access**.
- **Build trust** by ensuring **secure authentication, verified property listings, and transparent rental processes**.
- **Understand** the current rental system and provide an **efficient, reliable, and technology-driven solution** that meets customer needs.
