

Project Design Phase
Proposed Solution Template

Date	29 June 2026
Team ID	
Project Name	House Rent
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Difficulty and inefficiencies in the house renting process for tenants, landlords, and administrators.
2.	Idea / Solution description	HouseHunt is a comprehensive web-based platform designed to streamline house rentals, featuring distinct interfaces for tenants, landlords, and admins. It provides efficient property search, listing management, booking for property visits, reviews, and platform analytics.
3.	Novelty / Uniqueness	A role-based monorepo architecture built with React 19, Vite 8, Node.js, Express, and MongoDB, with features like an integrated wishlist, visit booking, unique review enforcement, role-specific dashboards, and simulated password resets. It prioritizes efficient property management for landlords and secure.
4.	Social Impact / Customer Satisfaction	A role-based monorepo architecture built with React 19, Vite 8, Node.js, Express, and MongoDB, with features like an integrated wishlist, visit booking, unique review enforcement, role-specific dashboards, and simulated password resets. It prioritizes efficient property management for landlords and secure.
5.	Business Model (Revenue Model)	Potential models could include listing fees for landlords, premium placement fees for properties, transaction fees for confirmed bookings, or a subscription-based model for additional features.
6.	Scalability of the Solution	Potential models could include listing fees for landlords, premium placement fees for properties, transaction fees for confirmed bookings, or a subscription-based model for additional features.
