

User Flow

1. Start

Description:

The user begins their journey to search for a suitable rental property using the HouseHunt application.

2. User Opens HouseHunt App

Description:

The user launches the HouseHunt application on a smartphone or web browser to access available rental property listings.

3. User Registers or Logs In

Description:

New users create an account by providing the required details, while existing users log in using their registered credentials to access personalized features.

4. User Searches for a Property

Description:

The user browses available rental properties using search filters such as location, rent range, property type, and amenities to find listings that match their preferences.

5. Property Suitable

Description:

The user reviews the property details. If a suitable property is found, they proceed to contact the property owner. If not, they continue browsing other available listings until they find a suitable option.

6. User Chats with Owner

Description:

The user communicates directly with the property owner through the in-app chat feature to discuss property details, availability, and any additional queries before making a decision.

7. End

Description:

Once the user decides to proceed with a property, the remaining activities such as negotiations, agreement signing, payment, and property handover are completed outside the application, marking the end of the user's in-app journey.

Workflow
