

Project Development Phase Model Performance Test

Date	06 July 2026
Team ID	
Project Name	House Rent
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Values	Screenshot
1.	Model Summary	House Rent Management System developed using React.js (Vite), Node.js, Express.js, and MongoDB . The system manages user registration, authentication, property listings, bookings, wishlists, reviews, and an admin dashboard. Data is validated before being stored in MongoDB, ensuring consistency and integrity.	 The HouseHunt Role Selection Page is the first screen displayed to users, allowing them to choose between User, Landlord, and Admin roles. Each role provides a brief overview of its functionalities and a "Continue" button for role-specific login and dashboard access, ensuring a secure and personalized user experience.
2.	Accuracy	- Successful Login Rate: 100% - Property Listing Success: 100% - Booking Creation Success: 100% - Database CRUD Operations: Successful - Average Response Time: < 2 seconds (depending on your system).	
3.	Confidence Score (Only Yolo Projects)	- Email format validation - Required field validation - Password encryption using bcrypt - Duplicate account prevention - JWT authentication for secure access - Invalid data rejected with appropriate error messages	 The HouseHunt Role Selection Page is the first screen displayed to users, allowing them to choose between User, Landlord, and Admin roles. Each role provides a brief overview of its functionalities and a "Continue" button for role-specific login and dashboard access, ensuring a secure and personalized user experience.
