

Project Development Phase
Performance Test

Date	06 July 2026
Team ID	
Project Name	House Rent
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Values: Property data, landlord details, tenant details, booking records, reviews, wishlist items, user profiles are successfully displayed from the MongoDB database through the React frontend. Screenshot: Dashboard showing property listings or admin dashboard.
2.	Data Preprocessing	Values: Input validation performed during user registration, login, property creation. Empty fields, invalid email formats, invalid phone numbers, and duplicate records are handled. Passwords are encrypted using bcrypt before storage. Screenshot: Registration or login form with validation.
3.	Utilization of Filters	Values: Users can filter properties by location, rent price, property type, number of bedrooms, availability status, and search keywords. Screenshot: Property search page showing filters.
4.	Calculation fields Used	Values: Total Properties, Available Properties, Booked Properties, Total Users, Total Landlords, Total Tenants, Average Property Rating, Monthly Rent Statistics. Screenshot: Admin dashboard displaying these statistics.
5.	Dashboard design	No. of Visualizations / Graphs: 6 Suggested graphs: 1. Properties by City (Bar Chart) 2. Property Type Distribution (Pie Chart) 3. Monthly Booking Trend (Line Chart) 4. User Distribution (Tenant vs Landlord) (Pie Chart) 5. Property Availability Status (Doughnut Chart) 6. Monthly Rental Income (Bar Chart) Screenshot: Dashboard containing all six charts.

6	Story Design	No. of Visualizations / Graphs: 6 Suggested dashboard story flow: • Overview of the system • User statistics • Property statistics • Booking analysis • Revenue analysis • Property availability and occupancy summary Screenshot: Dashboard story or navigation between analytics pages.
