

Frontend Setup (Installing React Application)

Story: Frontend Setup (Installing React Application)

Estimated Duration: 10 Minutes

Description

The Frontend-side of the House Rent Management System is developed using **React.js** with **Vite**, which provides a fast development environment and improved performance. Follow the steps below to set up and run the frontend application.

Step 1: Open the Frontend Folder

Open **Visual Studio Code** and launch the integrated terminal.

Navigate to the project directory where the **Frontend** folder will be created or already exists.

Step 2: Create a React Application

Execute the following command to create a new React application using Vite.

```
npm create vite@latest . -- --template react
```

Note:

- `npm create vite@latest` creates a new Vite project.
- `.` creates the project in the current directory.
- `--template react` selects React as the project framework.

Step 3: Select the Framework

After executing the command, Vite will prompt you to choose a framework.

Select:

React

Step 4: Select the Variant

Next, Vite will ask you to choose a programming language variant.

Select:

JavaScript

Step 5: Navigate to the Frontend Folder

If the project was created outside the client directory, navigate into the Frontend folder.

```
cd client
```

Step 6: Install Project Dependencies

Install all required packages and dependencies by running:

```
npm install
```

This command downloads all libraries required by the React application and creates the **node_modules** folder.

Step 7: Start the Development Server

Run the following command to start the React development server.

```
npm run dev
```

Step 8: Open the Application

After the server starts successfully, Vite will display an output similar to the following:

VITE v7.x.x ready in xxx ms

→ Local: <http://localhost:5173/>

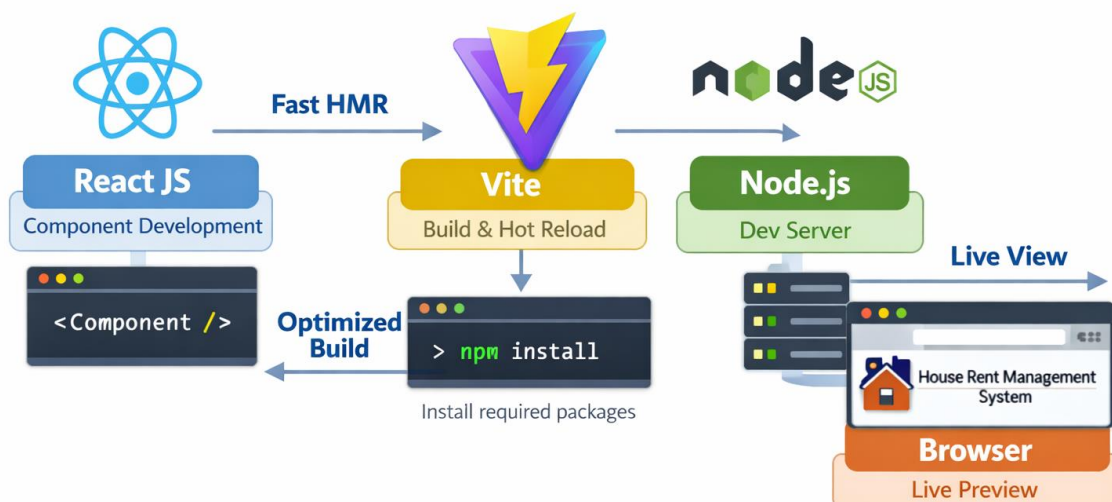

→ Network: <http://192.xxx.x.x:5173/>

Open the following URL in your web browser:

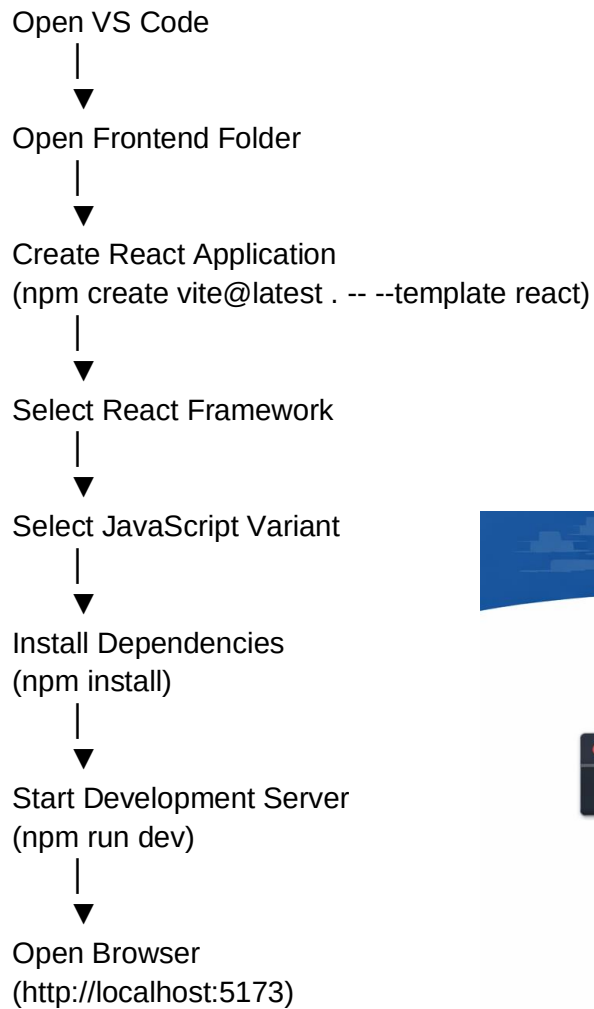

<http://localhost:5173>

The React application will load successfully and display the frontend of the House Rent Management System.

Frontend Setup Workflow

Command Flow for React Setup

Frontend Setup Summary

Step	Action	Command / Selection	
1	Open Frontend Folder	Open VS Code and navigate to the frontend directory.	
2	Create React Application	npm create vite@latest . -- --template react	
3	Select Framework	React	
4	Select Variant	JavaScript	
5	Navigate to Frontend Folder	cd frontend	
6	install Dependencies	npm install	
7	Start Development Server	npm run dev	
8	Open Application	http://localhost:5173
